

Health and Safety Statement

The designated manager of ERMICO Kft regularly assesses which elements of our activities have harmful impact on health.

We are aware of the fact that improved working conditions result in better health, safety, and efficiency, therefore we use our best endeavors to:

- promote the effective protection of our staff's health through the regular mandatory occupational health exams and customized additional tests
- provide regular support to the company's employees in various recreational activities

In our projects, we pay particular attention to monitoring compliance with the regularly changing and increasingly stricter work safety regulations. To this end, we provide regular fire safety, shock protection, and accident prevention trainings to our subcontractors who work on third-party sites.
