

Declaration of Conformity

As the managing director of LBS ECoNET Ltd. and as the leader of the ERMICO implementation project I declare that the installed ECoNET ERP system covers the whole range of processes managed by the company and, in addition to complying with current Hungarian laws, we have tailored the system to the requirements of ERMICO.

During the deployment of the system, we have taken into account that Ermico would be able to adapt quickly and flexibly to customers' demands and requests and serve their customers at the best possible price. Because of this aim all steps of the sales process have been integrated: customer price requests, vendor price request, outbound quotations, order handling and confirmation, delivery and fulfilment confirmation, invoicing. The management information system ensures that both customer and vendor information is presented in a flexible, quantifiable manner, thereby supporting fast decision making.

Thanks to the scalable design of the system, it is able to keep track of the changes that come from the company's growth and development.
